Initial reactions to the Farm to Fork and Biodiversity Strategies

EP Intergroup on Climate Change, Biodiversity & Sustainable Development
+ IUCN European Regional Office
July 2nd, 2020. Online

European Molluscs' Producers Association

Federation of European Aquaculture Producers

Which is Aquaculture's role in the Green Deal?

What are we asking for to unlock Aquaculture's Green Deal?

1. Assignment of space for growth

Growth requires a robust, reliable and clear legal framework for space and licenses, and visibility for investments.

2. Water quality

The Water Framework Directive is currently not providing enough quality waters nor protection of our shellfish areas.

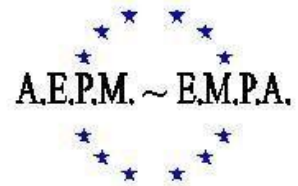

3. A level playing field with imports

No economic sustainability will ever be achieved...

- a) If consumers are not empowered to choose sustainable food.
- b) If there is no balance with imports.
- c) If public authorities cherry-pick for environmental-only issues in the F2F Strategy.

AQUACULTURE

Thanks for your attention.
